### **Features**

- \* Side looking special for LCD backlight.
- \* Ultra bright AlInGaP Chip LED.
- \* Package in 8mm tape on 7" diameter reels.
- \* Compatible with automatic placement equipment.
- \* Compatible with infrared and vapor phase reflow solder process.
- \* EIA STD package.
- \* I.C. compatible.

Notes: 1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve.

- 2.  $\theta$  1/2 is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- 3. The dominant wavelength,  $\lambda$  d is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.

### Cleaning

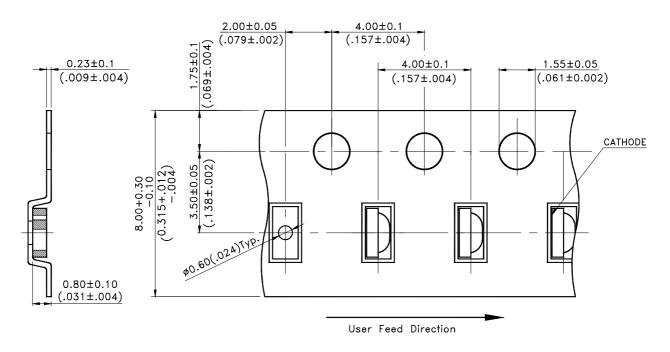

Do not use unspecified chemical liquid to clean LED they could harm the package.

If clean is necessary, immerse the LED in ethyl alcohol or in isopropyl alcohol at normal temperature for less one minute.

### **CAUTIONS**

### 1. Application limitation

The LEDs described here are intended to be used for ordinary electronic equipment (such as office equipment, communication equipment and household application.) Consult Liteon's sales in advance for information on application in which exceptional quality and reliability are required, particularly when the failure or malfunction of the LEDs may directly jeopardize life or health (such as airplanes, automobiles, traffic control equipment, life support system and safety devices).

### 2. Storage

Before opening the package: The LEDs should be kept at 30°C or less and 85%RH or less. The LEDs should be used within a year.

After opening the package: The LEDs should be kept at 30°C or less and 70%RH or less. The LEDs should be soldered within 168 hours(7 days) after opening the package.

Please avoid rapid transitions in ambient temperature in high humidity environments where condensation may occur.

### 3. Cleaning

Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LED.

### 4. Soldering

Do not apply any stress to the lead frame during soldering while the LED is at high temperature. Recommended soldering condition

Reflow soldering		Solder	ring iron	Wave soldering		
Pre-heat Pre-heat time Peak temperature Soldering time	120~150°C 120 sec. Max. 240°C Max. 10 sec. Max.	Soldering time 3 sec. Max. (one time only)		Pre-heat Pre-heat time Solder wave Soldering time	100°C Max. 60 sec. Max. 260°C Max. 10 sec. Max.	

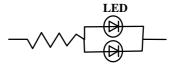

### 5. Drive Method

LED is a current operated device, and therefore, requires some kind of current limiting incorporated into the drive circuit. This current limiting typically takes the form of a current limiter resistor placed in series with the LED.

Consider worst case voltage variations that could occur across the current limiting resistor. The forward current should not be allowed to change by more than 40% of its desired value.

### Circuit model A

### Circuit model B

- (A) Recommended circuit.
- (B) The difference of brightness between LEDs could be found due to the Vf-If characteristics of LED.

### Property of Lite-On Only

### **6. ESD (Electrostatic Discharge)**

Static Electricity or power surge will damage the LED. Use of a conductive wrist band or antielectrostatic glove is recommended when handling these LED. All devices, equipment and machinery must be properly grounded.
